Construction Value

\$ 750 Million

In conjunction with three joint-venture partners and spread out over a 10-year period, Panzica Construction Company is providing construction management services to the State of Ohio for Akron Public Schools for varying degrees of renovation, restoration and new construction for 62 elementary, middle and high school buildings. The Akron Public Schools Master Facility Plan calls for all buildings to become "Community Learning Centers" and used as schools during the day and community centers during the night.

The combined construction value of over \$750 million is the largest construction endeavor in the history of Akron. It will provide hundreds of jobs and generate more than \$800 million in the local community.

Working with local organizations and programs, much emphasis will be put on socially and economically disadvantaged business enterprises using the "EDGE" (Encouraging Diversity program, Growth and Equity). Local economies will be positively affected by involving existing disadvantaged companies and personnel.

As with our other Ohio School Facilities Commission projects, our services include the usual and customary pre-construction and construction phase services, but also includes state-of-the-art web-based project management.
